

What are the problems we are trying to solve?

- Data Model
 - Broader in the sense it should include data, SPICE & documentation more thoroughly
 - More restrictive in allowed data formats
 - Restructure catalog and keywords with a view for improved data search as well as description
- Standards Reference
 - Complete rewrite emphasizing clarity
 - Clarify what is required and what is prohibited
- PDSDD
 - Remove introductory information (e.g., the discussion of classes) and move to Standards Reference
 - remove deprecated objects and keywords
 - incorporate versioning
 - physical and electronic versions
- Determine the search and access capabilities we're trying to support
 - Catalog file hierarchy becoming less applicable
